Dear Colleagues,

*Interdisciplinarity constitutes a key word with profound implications in order to reach performance in the medical practice as well as to materialize the integrative holistic vision of oral and general rehabilitation. Failure to see the dental medicine as a self-sufficient clinical entity constitutes the sine qua non condition of a modern therapeutic approach that governs the contemporary dental practice.*

*The interplay of various types of field anchored in the sphere of systemic pathology on the therapeutic approaches in the field of dental medicine materializes as pertinent starting points for the realization of bivalent studies destined to the holistic approaches among various specialties of general medicine and oral therapies.*

*The fundamental disciplines have a fundamental role in tracing the main mechanisms involved in various types of pathologies, basic aspects that lie at the basis of the therapeutic decisional algorithm in the oral and general medical practice.*

*The thorough knowledge of the type of terrain shown by the patient with dental lesions constitutes an essential trajectory that diminishes accidents and risks and that should govern the current dental medical therapy.*

*To be continuously linked to what's new constitutes an essential aspect towards evolution on a professional level and the access to the latest science discoveries in the medical field materializes in a viable starting point for bringing excellence, avant-garde and the latest technology in the daily practice.*
